

Automatic Gas Shut Off Valves

Available for 150 pound cylinders, Ton Containers,
 and Remote Systems.

Shut off valve with Vacuum Regulator

The use of emergency shut off valve systems can greatly reduce the risk of a significant gas release. The system will close the gas cylinder valve(s) within seconds of activating a manual panic button, an external alarm signal, or an internal fail-safe alarm signal.

Global Treat, Inc. provides the industry's finest chemical gas feeders in addition to high quality safety control monitors such as a gas detector, together with the very reliable automatic shut off valve.

*Product conforms to
 CHLORINE INSTITUTE
 publication recommendations
 on emergency closure devices
 for container valves.*
